

SCALEMATRIX

ScaleMatrix Provides Cloud Flexibility and Performance to Deliver Innovative Solutions

ScaleMatrix delivers variable-density colocation, high-performance cloud, data protection, and professional support services from specialized data centers. ScaleMatrix next-generation data centers enable the company to deliver aggressively priced, highly differentiated services which help customers compete in today's crowded marketplace. ScaleMatrix customers can run on the highest compute in the market today for their worker nodes or code on the lower compute to save costs. ScaleCloud Enterprise Tier utilizes the Intel® Xeon® Scalable Platinum 8180 processors because they are optimized for AI and HPC workloads. This includes Intel® 3D NAND technology for reliability, performance, and low power utilization.

"Intel® technologies are at the foundation of all the services we offer here at ScaleMatrix. Our 15 year partnership with Intel has been fantastic, and being able to see into the future with roadmaps and technology advancements help us deliver better products and services that predict the needs of our customers."

**Chris Orlando, CEO,
ScaleMatrix**
